The MEMS Technology Department at Sandia National Laboratories conducts research and development for advanced microelectromechanical systems that push the technology ...

MicroElectroMechanical Systems (MEMS)

A vibrating structure gyroscope, defined by the IEEE as a Coriolis vibratory gyroscope (CVG), is a gyroscope that uses a vibrating structure to determine the rate of rotation. A vibrating structure gyroscope functions much like the halteres of flies (insects in the order Diptera).. The underlying physical principle is that a vibrating object tends to continue vibrating in the same plane even ...

History. The field of EAPs emerged back in 1880, when Wilhelm Röntgen designed an experiment in which he tested the effect of an electrostatic field on the mechanical properties of a stripe of natural rubber. The rubber stripe was fixed at one end and was attached to a mass at the other. Electric charges were then sprayed onto the rubber, and it was observed that the length changed.

Introduction We hope this page will eventually contain all the known data about the SU-8 photoresist. Thus, we need your help! Send all your data number 1852, and I will include it in this page, with credits, of course! The SU-8 is a negative, epoxy-type, near-UV photoresist based on EPON SU-8 epoxy resin (from Shell Chemical) that has been originally developed, and patented (US Patent No ...
