Reconstruction of image is object blurred by  $1/r$  ... One of the most fundamental concepts in CT image reconstruction is the "Central-slice" theorem. This theorem states that the 1-D FT of the projection of an object is the same as the values of the 2-D FT of the object along a line

## CT Image Reconstruction

Image reconstruction in CT is a mathematical process that generates tomographic images from X-ray projection data acquired at many different angles around the patient. Image reconstruction has fundamental impacts on image quality and therefore on radiation dose.

## Image Reconstruction Techniques | Image Wisely

image is called image reconstruction, as shown in Fig. 1. In most cases, one of two types of algorithms is used in reconstructing images: analytical and iterative algorithms. An algorithm is a step-by-step mathematical procedure implemented on a computer. In nuclear medicine, image reconstruction is performed in a computer with reconstruc-

cal image reconstruction methods. The purpose of the annotation is to provide supplemental details, and particularly to provide extensive literature references for further study. For a fascinating history of tomography, see [1]. For broad coverage of image science, see [2].

## Iterative Methods for Image Reconstruction

Conference Paper (PDF Available) ... Constraint-free visual image reconstruction is more challenging, as it is impractical to specify brain activity for all possible images. In this study, we ...

## Estimating image bases for visual image reconstruction

Image reconstruction has been carried out using different types of reconstruction algorithms [4, 1]. Reconstruction methods utilize projection data as input and generate the estimate that ...
