A Java virtual machine (JVM) is a virtual machine that enables a computer to run Java programs as well as programs written in other languages that are also compiled to Java bytecode. The JVM is detailed by a specification that formally describes what is required of a JVM implementation. Having a specification ensures interoperability of Java programs across different implementations so that ...

net.sf.jasperreports.allow.element.negative.width: A property that determines whether elements having negative width values are allowed. If this value is set to false, the report is verified not to contain elements with negative width values. This is useful when the report is meant to be exported to grid-based formats such as HTML, XLS or CSV, which might enter an infinite loop.
