Numerical control (NC) (also computer numerical control (CNC)) is the automated control of machining tools (drills, boring tools, lathes) by means of a computer. An NC machine alters a blank piece of material (metal, plastic, wood, ceramic, or composite) to meet precise specifications by following programmed instructions and without a manual operator.

Numerical methods John D. Fenton a pair of modules, Goal Seek and Solver, which obviate the need for much programming and computations. Goal Seek, is easy to use, but it is limited " with it one can solve a single equation, however complicated or however many spreadsheet cells are involved, whether the equation is linear or nonlinear.

PDF FILE - [CLICK HERE FOR PRINTABLE WORKSHEET](#): CNC means Computer Numerical Control. This means a computer converts the design produced by Computer Aided Design software (CAD), into numbers. The numbers can be considered to be the coordinates of a graph and they control the movement of the cutter.

Numerical weather prediction (NWP) uses mathematical models of the atmosphere and oceans to predict the weather based on current weather conditions. Though first attempted in the 1920s, it was not until the advent of computer simulation in the 1950s that numerical weather predictions produced realistic results. A number of global and regional forecast models are run in different countries ...
